European governments must do more to improve access to contraception

Belgium, France and the UK score top for third year running

General reimbursement schemes (including long-term contraception)
Special arrangements for young and vulnerable groups
Government supported websites

But they too must do better to improve access for all

Most improved countries: Albania, Andorra, Finland & Greece

Most declined countries: Poland & Kosovo

11 Web winners
These countries have very good or excellent government supported websites

43%
of pregnancies in Europe are unintended

69%
of European women use contraception

7 Reimbursers
These countries provide special reimbursement for young people and vulnerable groups

LARC offer unique advantages
Long-acting reversible contraceptives (LARC) such as subdermal contraceptive implants, injections and IUDs are less prone to failure and show higher satisfaction rates than other contraceptive methods
